

CSCI 420 Computer Graphics  
Lecture 24

# Non-Photorealistic Rendering

Pen-and-ink Illustrations  
Painterly Rendering  
Cartoon Shading  
Technical Illustrations

Jernej Barbic  
University of Southern California

# Goals of Computer Graphics

- Traditional: Photorealism
  - Sometimes, we want more
    - Cartoons
    - Artistic expression in paint, pen-and-ink
    - Technical illustrations
    - Scientific visualization
- [Lecture next week]

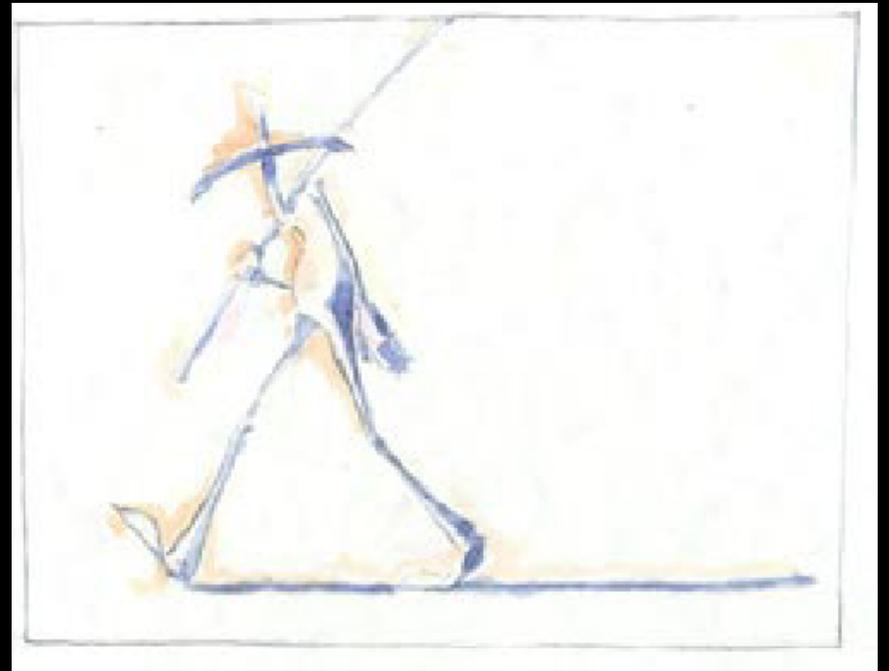

cartoon shading

# Non-Photorealistic Rendering

*“A means of creating imagery that does not aspire to realism”* - Stuart Green

Cassidy Curtis 1998

David Gainey

# Non-photorealistic Rendering

Also called:

- Expressive graphics
- Artistic rendering
- Non-realistic graphics
- Art-based rendering
- Psychographics

Source: ATI

Source: Bosch (2010)

# Some NPR Categories

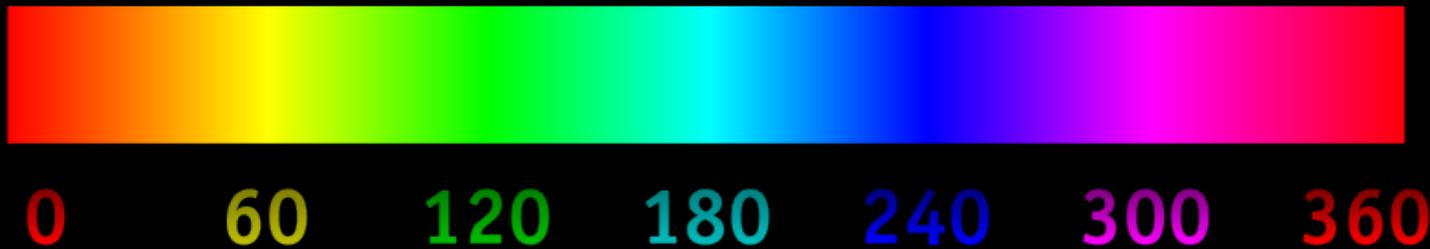

- **Pen-and-Ink illustration**
  - Techniques: cross-hatching, outlines, line art, etc.
- **Painterly rendering**
  - Styles: impressionist, expressionist, pointilist, etc.
- **Cartoons**
  - Effects: cartoon shading, distortion, etc.
- **Technical illustrations**
  - Characteristics: Matte shading, edge lines, etc.
- **Scientific visualization**
  - Methods: splatting, hedgehogs, etc.

# Outline

- Pen-and-Ink Illustrations
- Painterly Rendering
- Cartoon Shading
- Technical Illustrations

# Hue

- Perception of “distinct” colors by humans
- Red
- Green
- Blue
- Yellow

Hue Scale

Source: Wikipedia

# Tone

- Perception of “brightness” of a color by humans
- Also called lightness
- Important in NPR

lighter

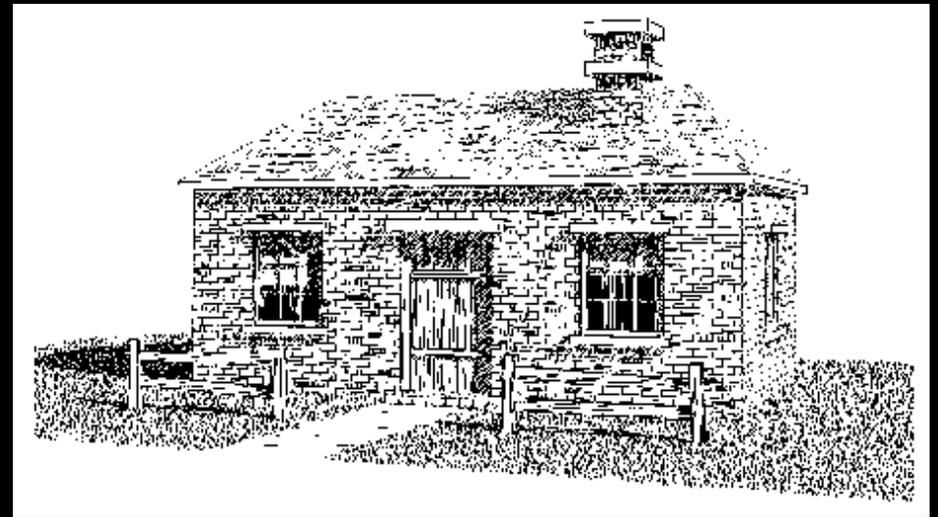

darker

Source: Wikipedia

# Pen-and-Ink Illustrations

Winkenbach and  
Salesin 1994

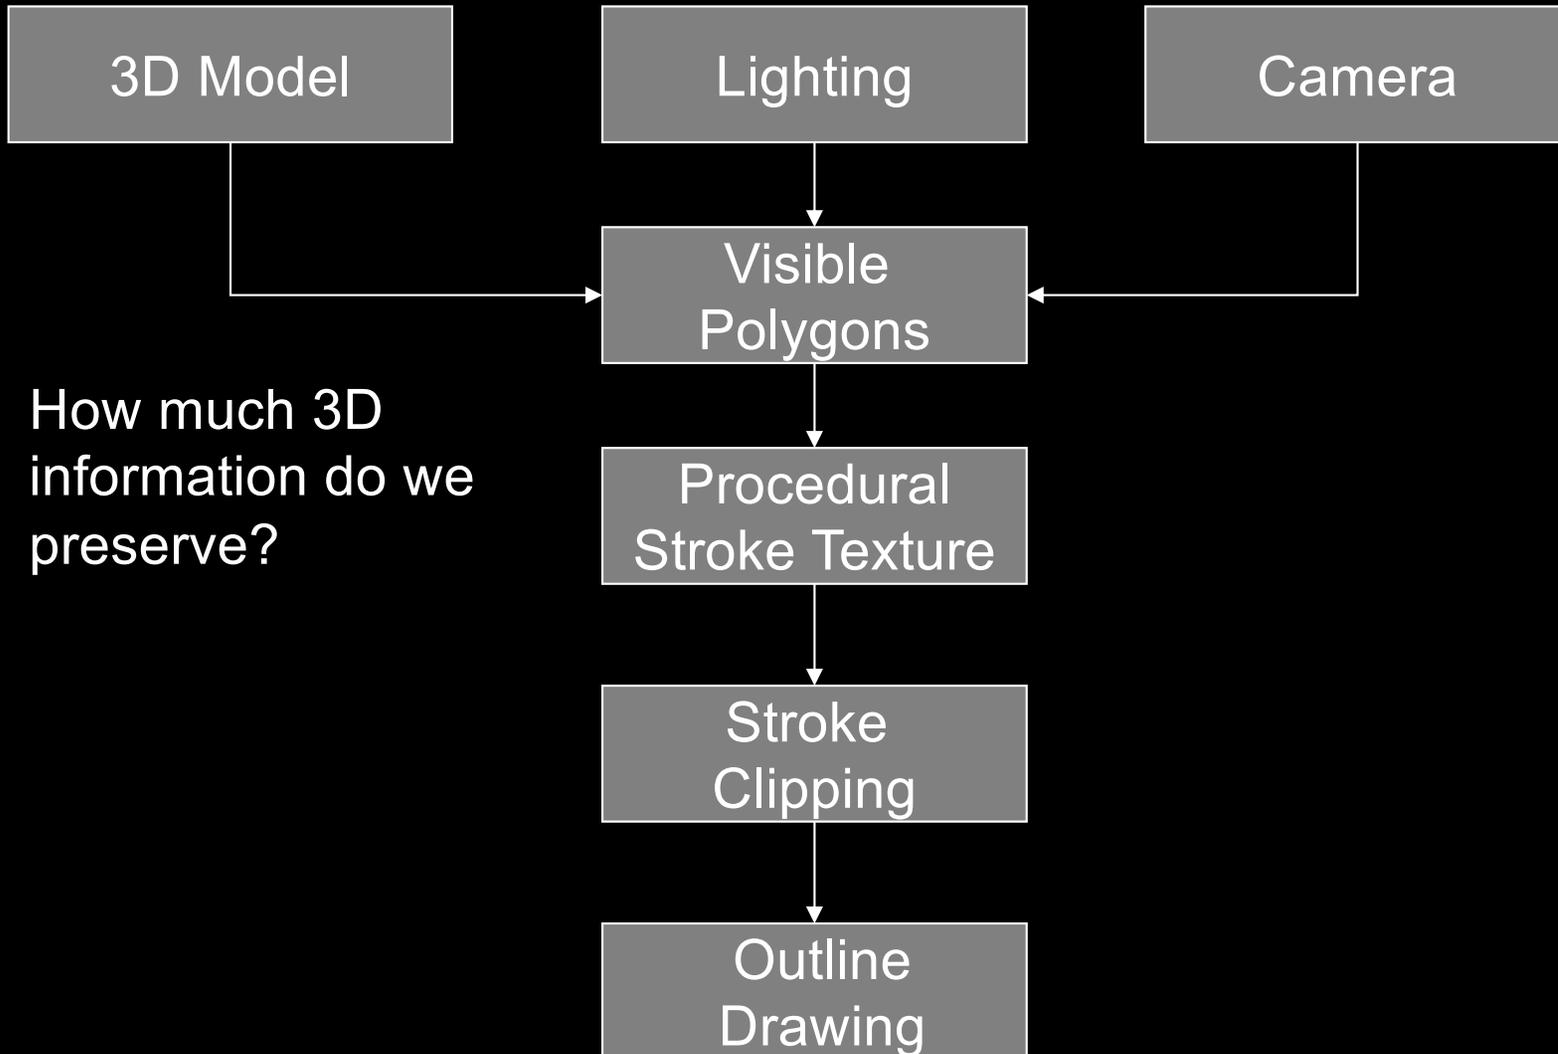

# Pen-and-Ink Illustrations

- **Strokes**
  - Curved lines of varying thickness and density
- **Texture**
  - Conveyed by collection of strokes
- **Tone**
  - Perceived gray level across image or segment
- **Outline**
  - Boundary lines that disambiguate structure

Winkenbach and  
Salesin 1994

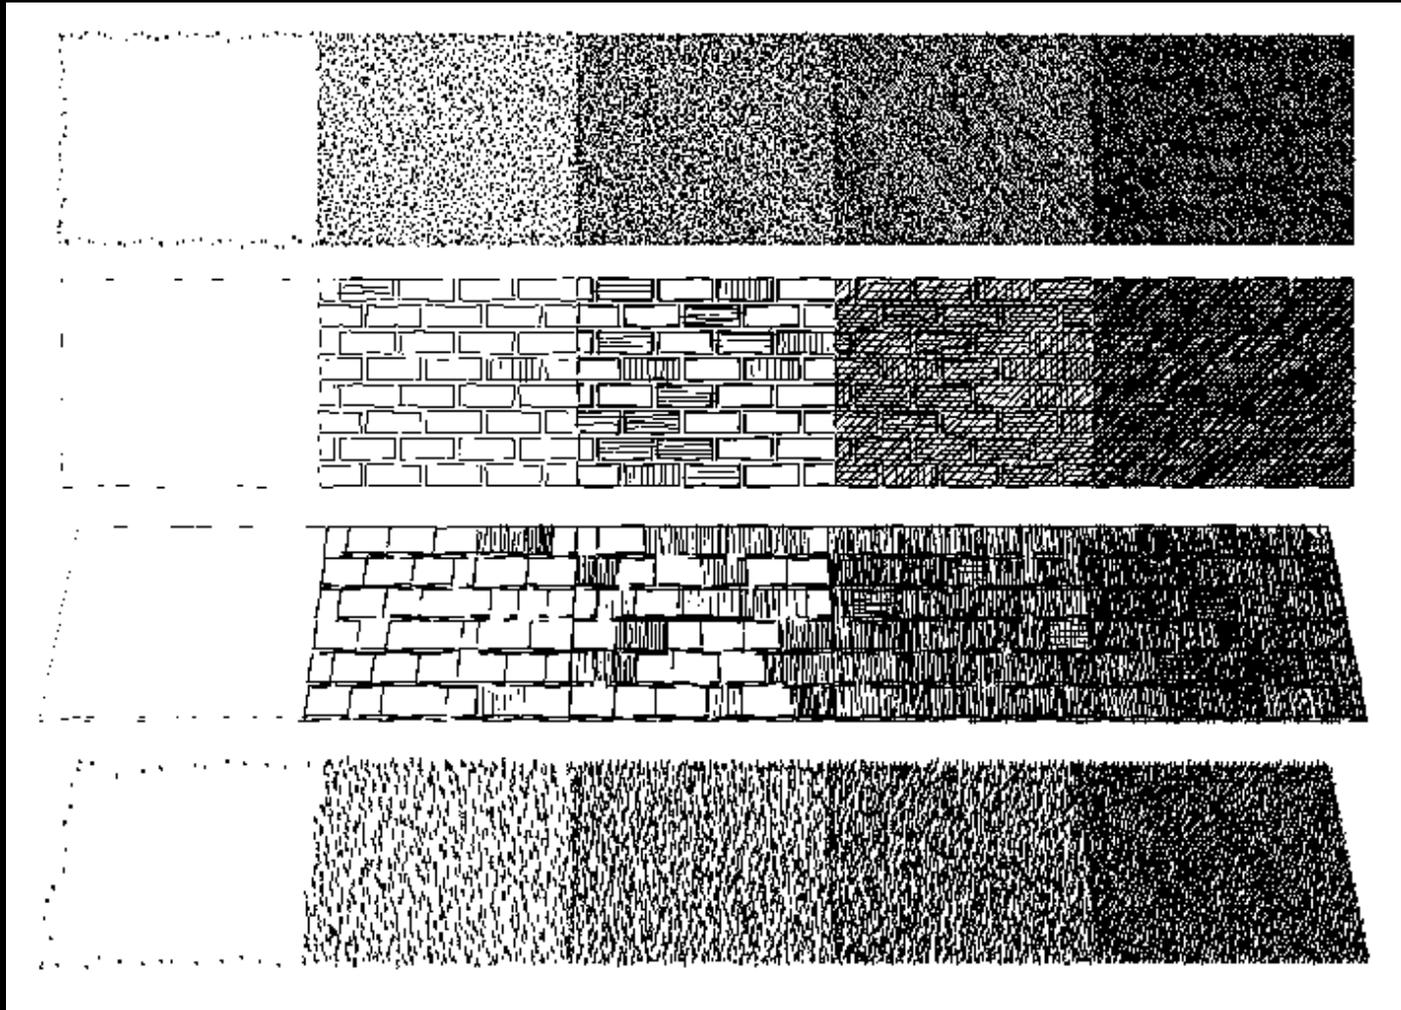

# Rendering Pipeline: Polygonal Surfaces with NPR

# Strokes and Stroke Textures

- Stroke generated by moving along straight path
- Stroke perturbed by
  - Waviness function (straightness)
  - Pressure function (thickness)
- Collected in **stroke textures**
  - Tone dependent
  - Resolution dependent
  - Orientation dependent
- How automatic are stroke textures?

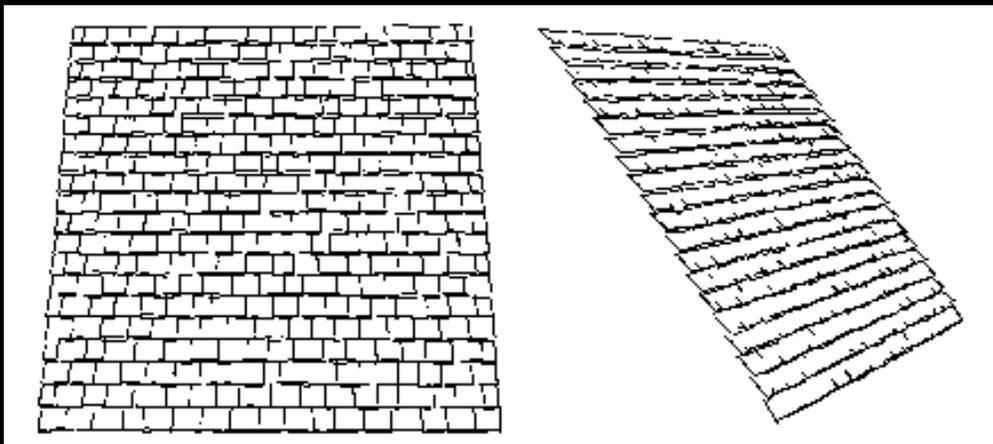

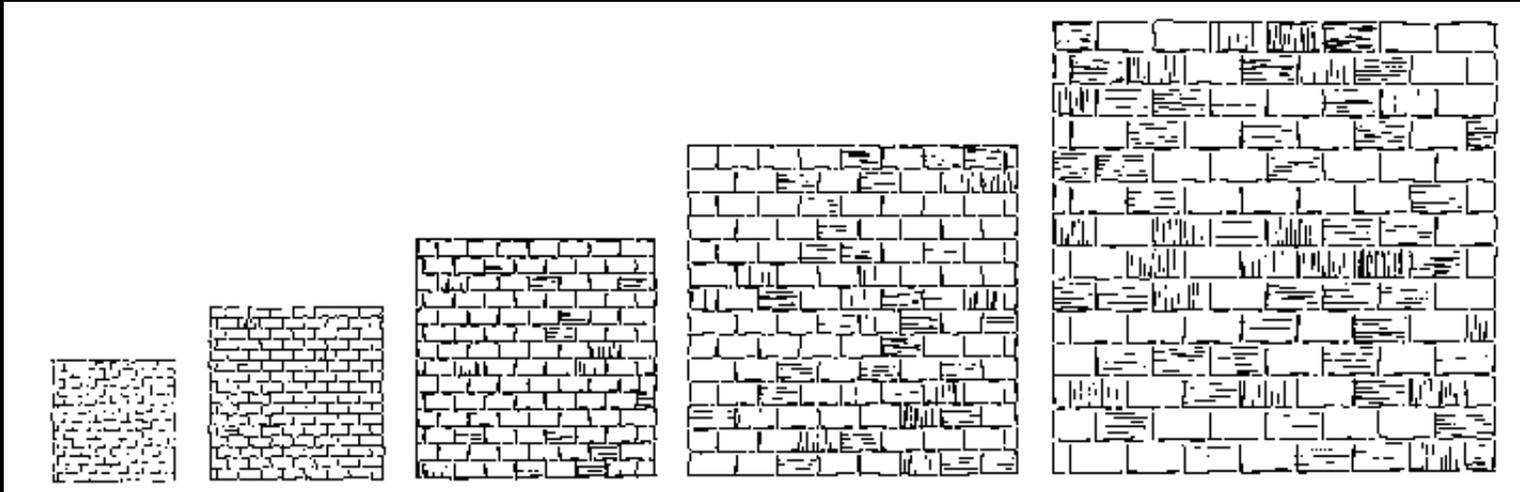

# Stroke Texture Examples

Winkenbach and Salesin 1994

# Stroke Texture Operations

## Scaling

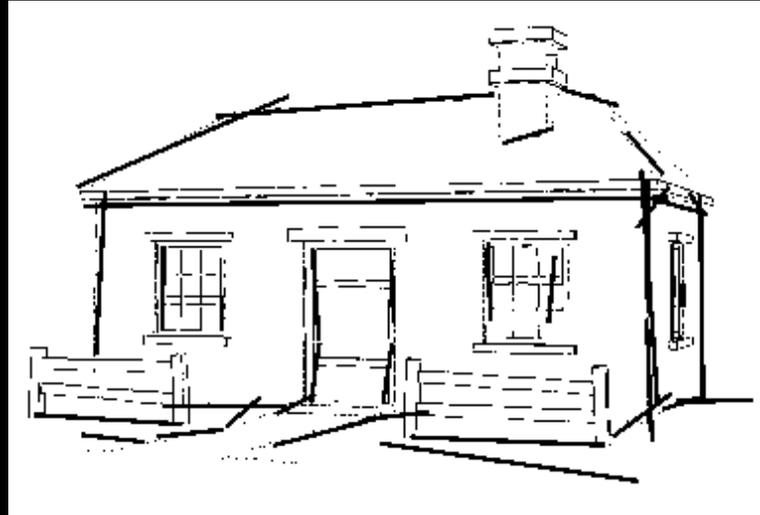

## Changing Viewing Direction (Anisotropic)

# Indication

- Selective addition of detail
- Difficult to automate
- User places detail segments interactively

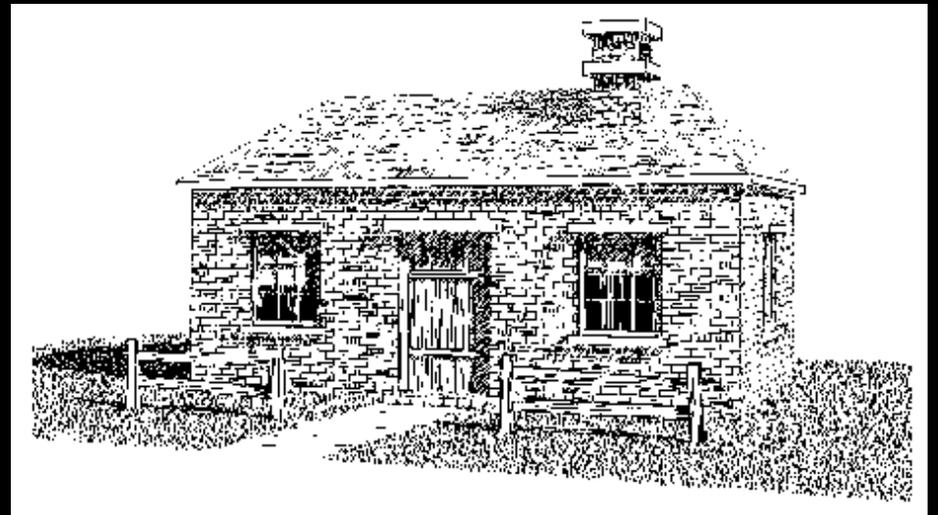

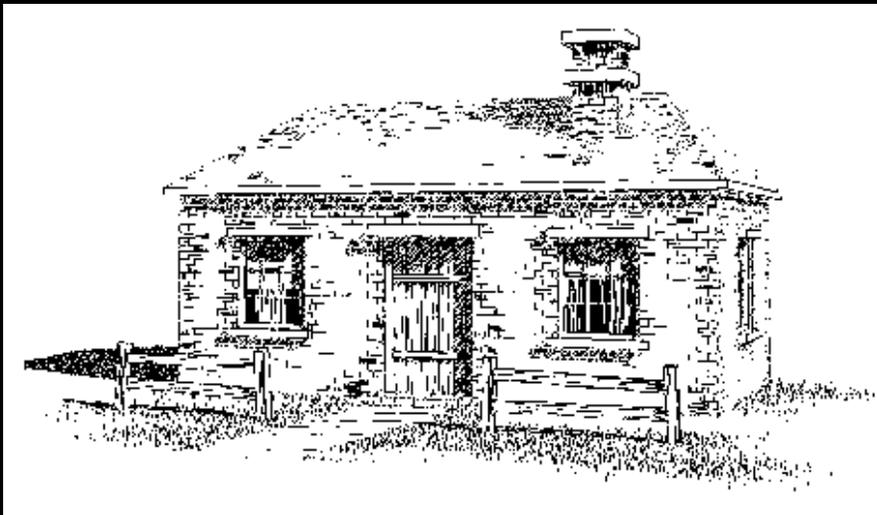

# Indication Example

Input without detail

With indication

Without indication

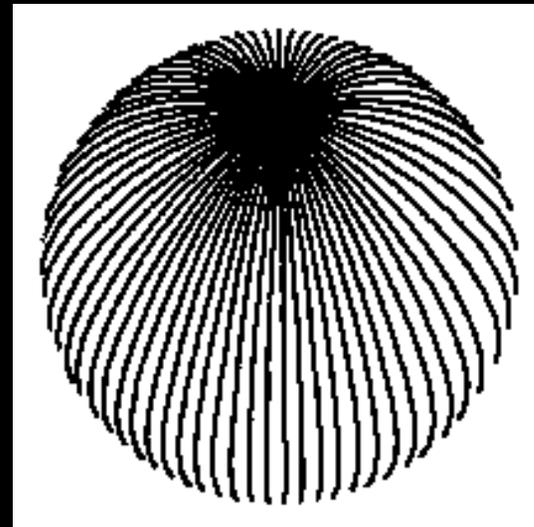

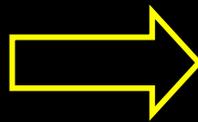

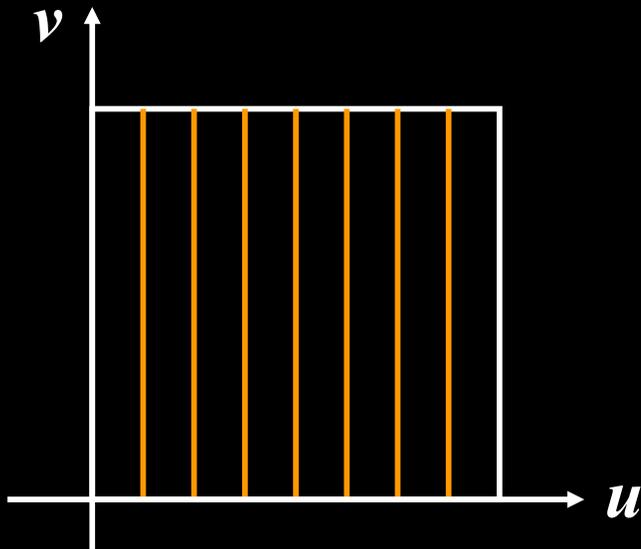

# Outlines

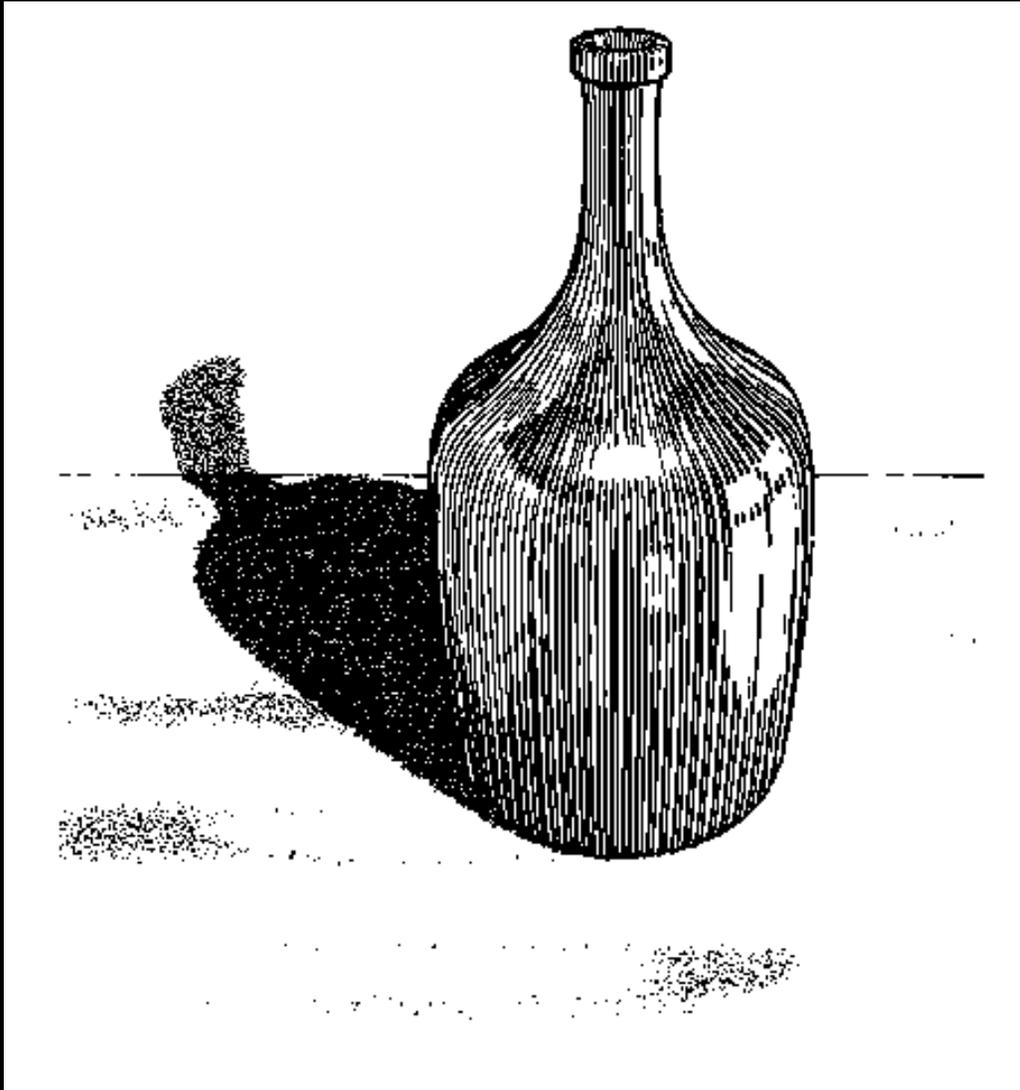

- Boundary or interior outlines
- Accented outlines for shadowing and relief
- Dependence on viewing direction
- Suggest shadow direction

# Rendering Parametric Surfaces

- Stroke orientation and density
  - Place strokes along isoparametric lines
  - Choose density for desired tone
  - $\text{tone} = \text{spacing} / \text{width}$

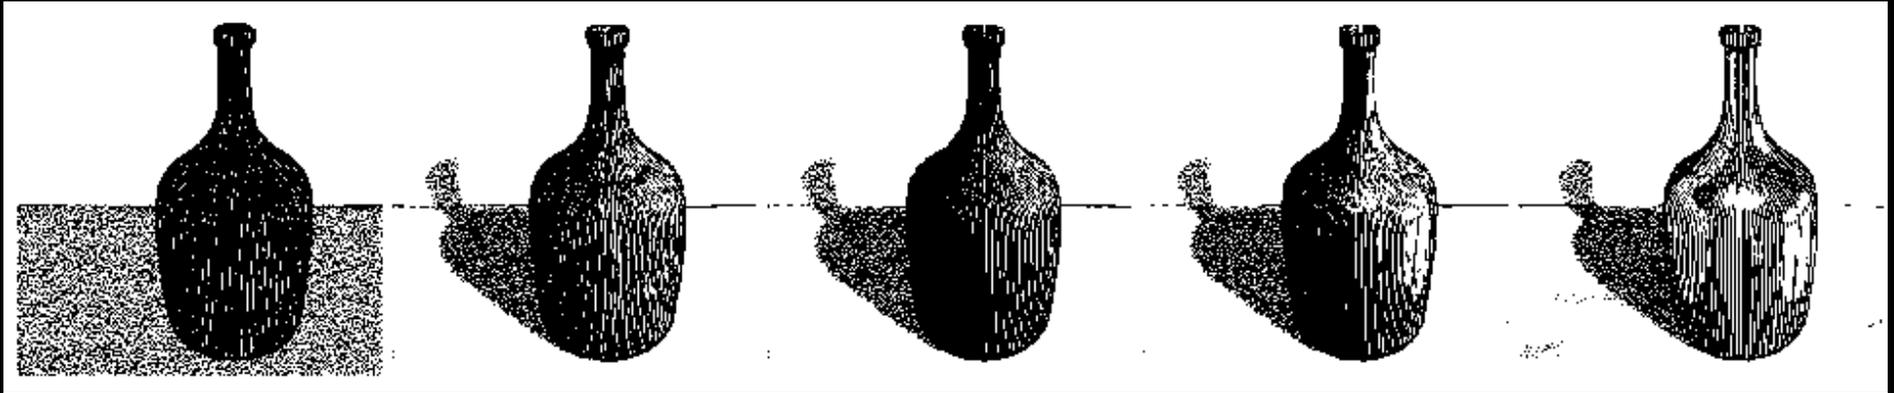

# Parametric Surface Example

Winkenbach and  
Salesin 1996

# Hatching + standard rendering

Constant-density  
hatching

Smooth shading  
with single light

Longer smoother  
strokes for glass

Environment  
mapping

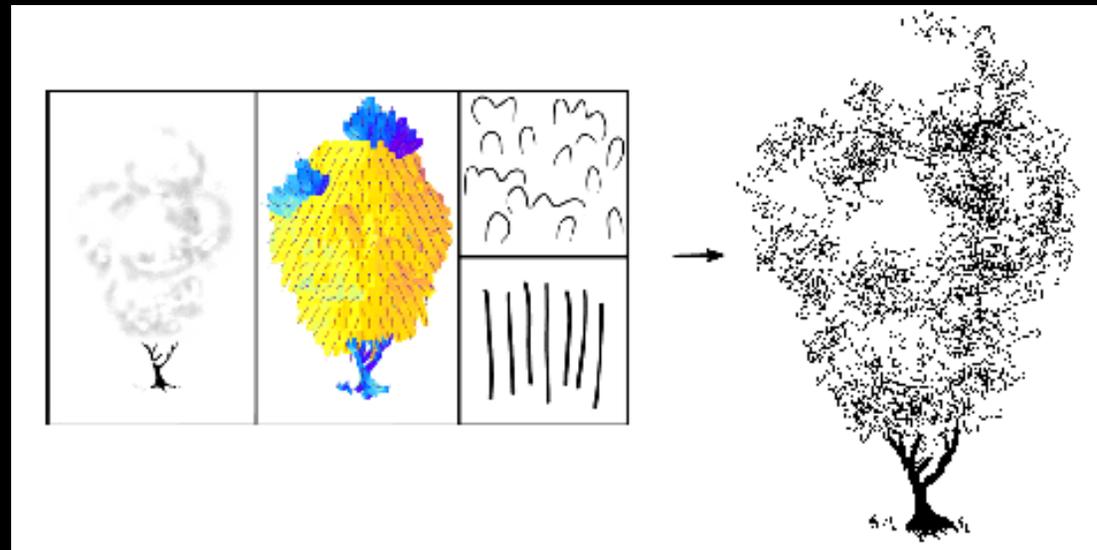

Varying reflection  
coefficient

Standard rendering techniques are still important!

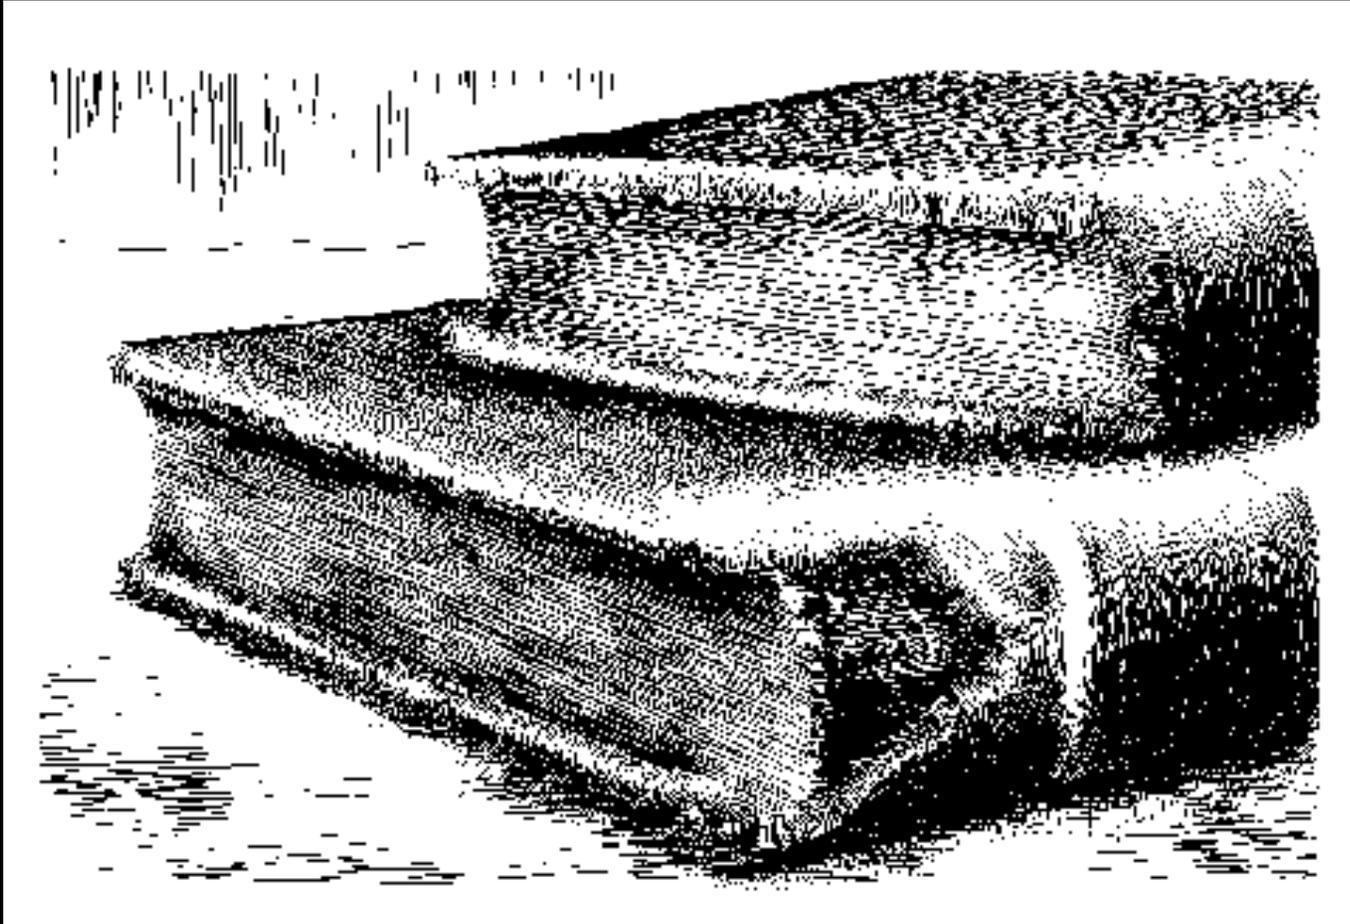

# Orientable Textures

- Inputs
  - Grayscale image to specify desired tone
  - Direction field
  - Stroke character
- Output
  - Stroke shaded image

Salisbury et al. 1997

# Orientable Stroke Texture Example

Salisbury et al. 1997

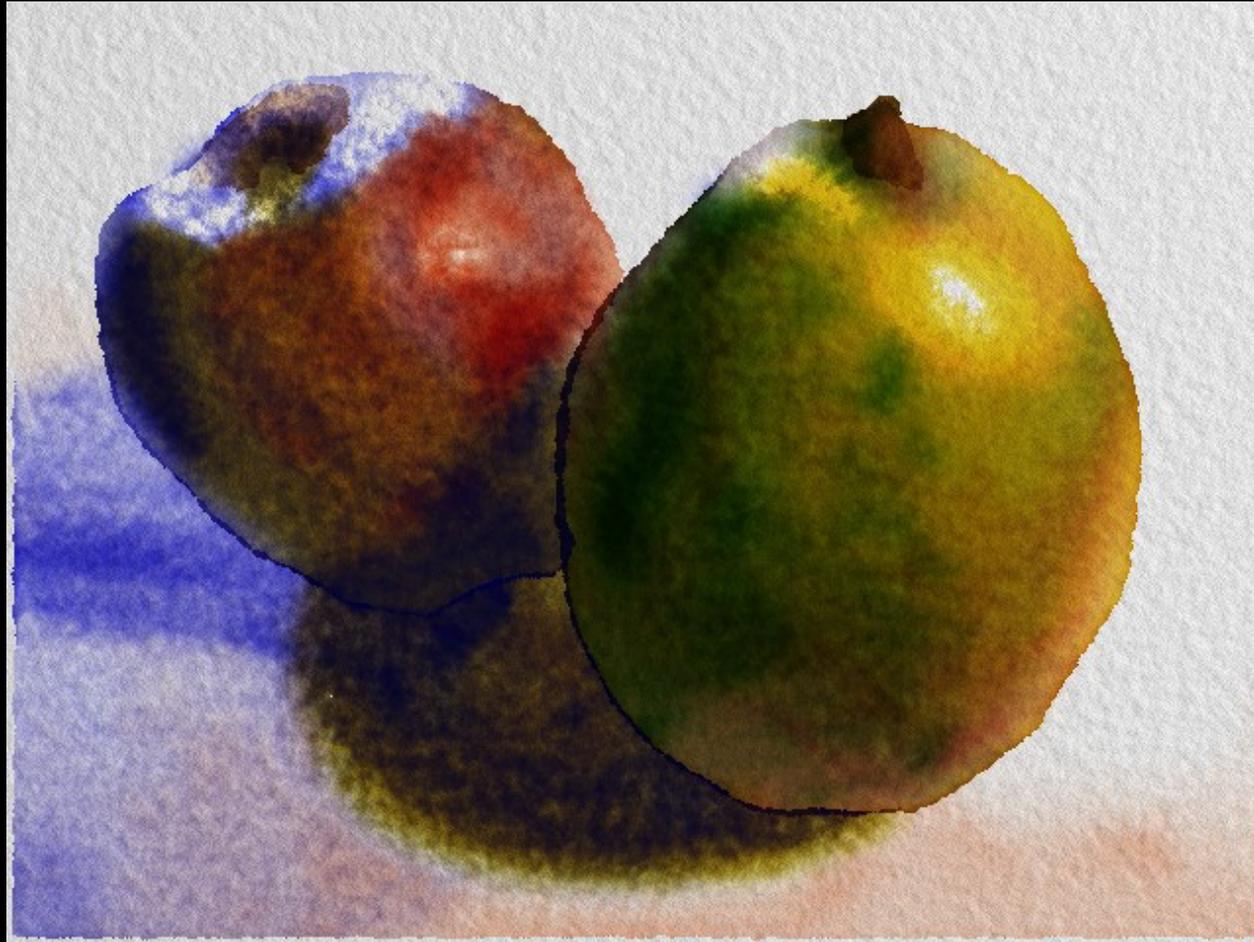

# Outline

- Pen-and-Ink Illustrations
- **Painterly Rendering**
- Cartoon Shading
- Technical Illustrations

# Painterly Rendering

- Physical simulation
  - User applies brushstrokes
  - Computer simulates media (paper + ink)
- Automatic painting
  - User provides input image or 3D model
  - User specifies painting parameters
  - Computer generates all strokes

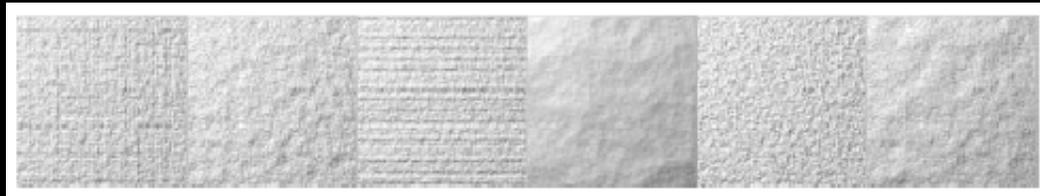

# Physical Simulation Example

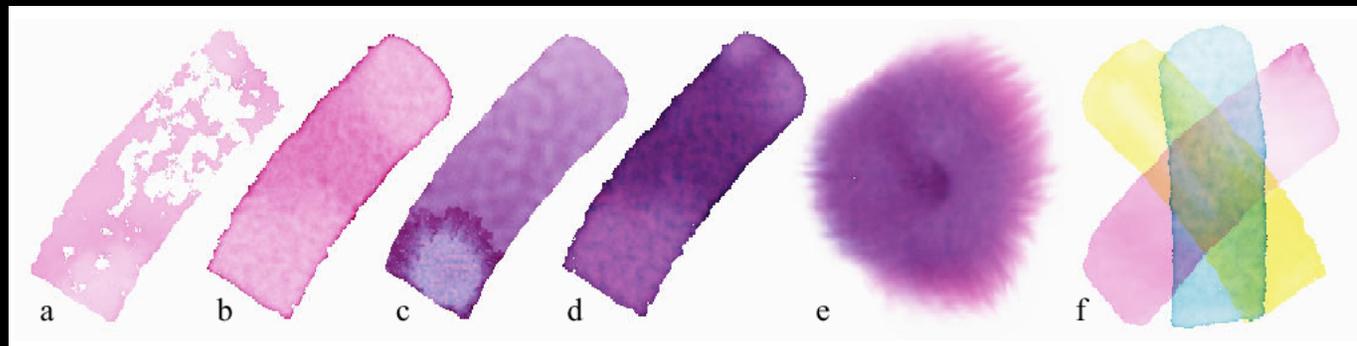

Curtis et al. 1997, *Computer Generated Watercolor*

# Computer-Generated Watercolor

- Complex physical phenomena for artistic effect
- Build simple approximations
- Paper generation as random height field

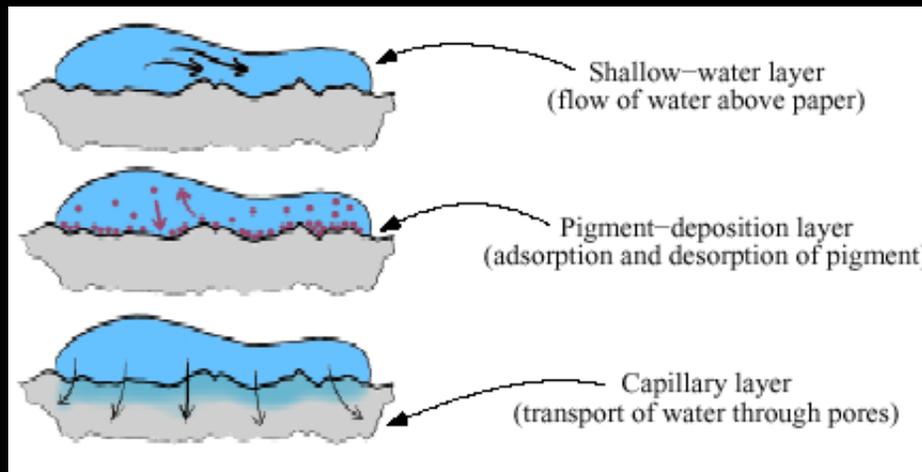

- Simulated effects

# Fluid Dynamic Simulation

- Use water velocity, viscosity, drag, pressure, pigment concentration, paper gradient
- Paper saturation and capacity

- Discretize and use cellular automata

# Interactive Painting

The image shows a screenshot of a digital painting application interface. The interface is divided into several panels:

- Palette Options:** Includes a color wheel, a vertical gradient bar, and buttons for "New Pigment" and "Delete Pigment". Below this are two pigment entries: "ultra\_violet" and "quin\_rose".
- Simulation Parameters:** Includes sliders for "Granulation" (set to .161), "Staining" (set to 2.00), and "Density" (set to .0200).
- Brush Options:** Includes sliders for "Size", "Penumbers", and "Cover".
- Layer Options:** Includes sliders for "Damping" (.010), "Darkening" (.010), "Edge Kernel" (10.00), "Quality" (.50), and "Iterations" (100).
- Layers Panel:** Shows a list of layers (1-5) and a preview window for the selected layer.
- Simulation in Progress:** A small window showing a partial view of the painting.
- Finished Painting:** A large window showing the complete painting of a purple fruit with green leaves.

Annotations with orange arrows point to specific elements:

- User input:** Points to the "Pigment" checkbox in the "View" section.
- Simulation in progress:** Points to the "Simulation in progress" window.
- Finished painting:** Points to the "Finished painting" window.

# Automatic Painting Example

Hertzmann 1998

# Automatic Painting from Images

- Start from color image: no 3D information
- Paint in resolution-based layers
  - Blur to current resolution
  - Select brush based on current resolution
  - Find area of largest error compared to real image
  - Place stroke
  - Increase resolution and repeat
- Layers are painted coarse-to-fine
- Styles controlled by parameters

# Layered Painting

Blurring

Adding detail with smaller strokes

# Painting Styles

- Style determined by parameters
  - Approximation thresholds
  - Brush sizes
  - Curvature filter
  - Blur factor
  - Minimum and maximum stroke lengths
  - Opacity
  - Grid size
  - Color jitter
- Encapsulate parameter settings as style

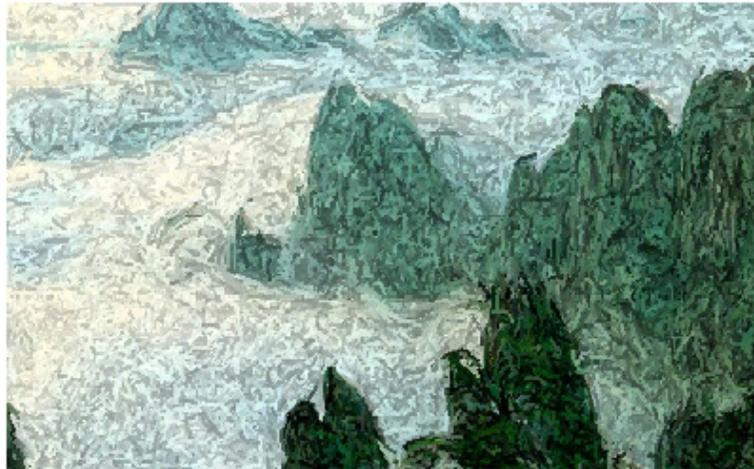

# Style Examples

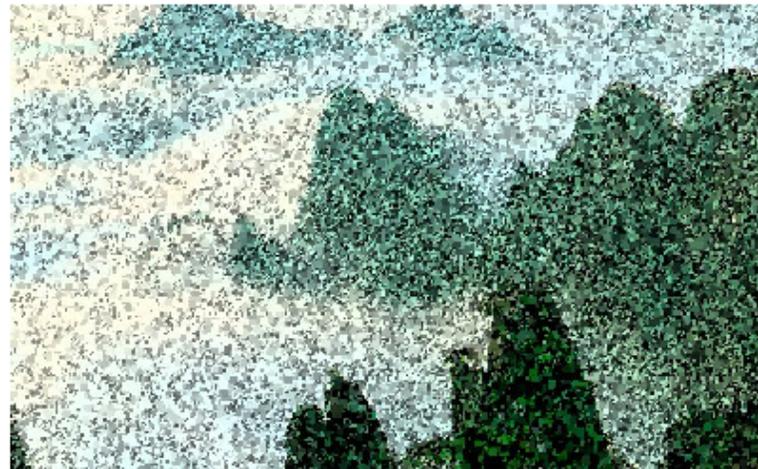

Source image

“Impressionist”

“Expressionist”

“Pointillist”

# Some Styles

- “Impressionist”
  - No random color,  $4 \leq \text{stroke length} \leq 16$
  - Brush sizes 8, 4, 2; approximation threshold 100
- “Expressionist”
  - Random factor 0.5,  $10 \leq \text{stroke length} \leq 16$
  - Brush sizes 8, 4, 2; approximation threshold 50
- “Pointilist”
  - Random factor  $\sim 0.75$ ,  $0 \leq \text{stroke length} \leq 0$
  - Brush sizes 4, 2; approximation threshold 100
- Not completely convincing to artists (yet?)

# Automatic Painting Using Neural Networks

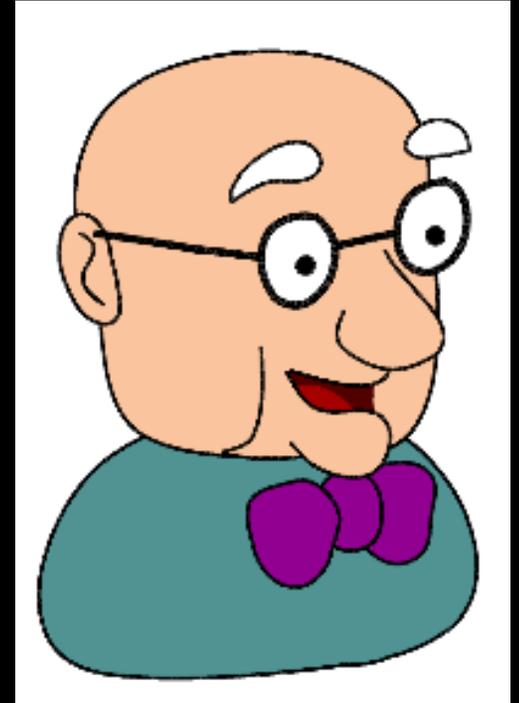

Wu et al. 2018

# Outline

- Pen-and-Ink Illustrations
- Painterly Rendering
- **Cartoon Shading**
- Technical Illustrations

# Cartoon Shading

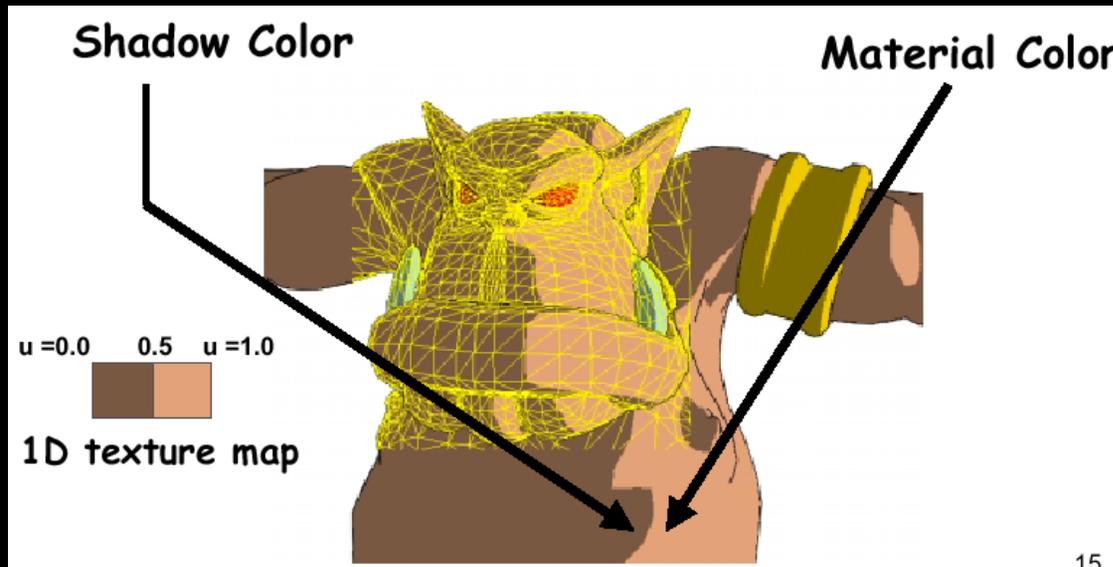

- Shading model in 2D cartoons
  - Use material color and shadow color
  - Present lighting cues, shape, and context
- Stylistic
- Used in many animated movies
- Real-time techniques for games

Rivers et al. 2010

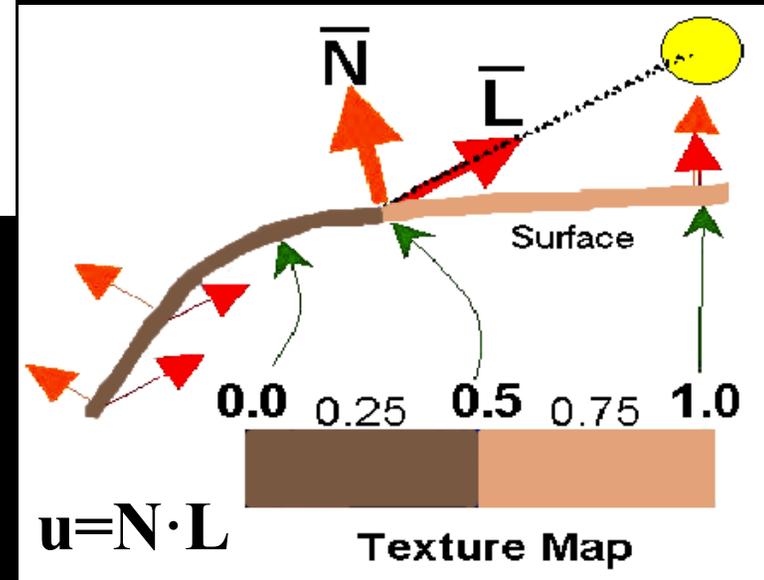

# Cartoon Shading as Texture Map

- Apply shading as 1D texture map

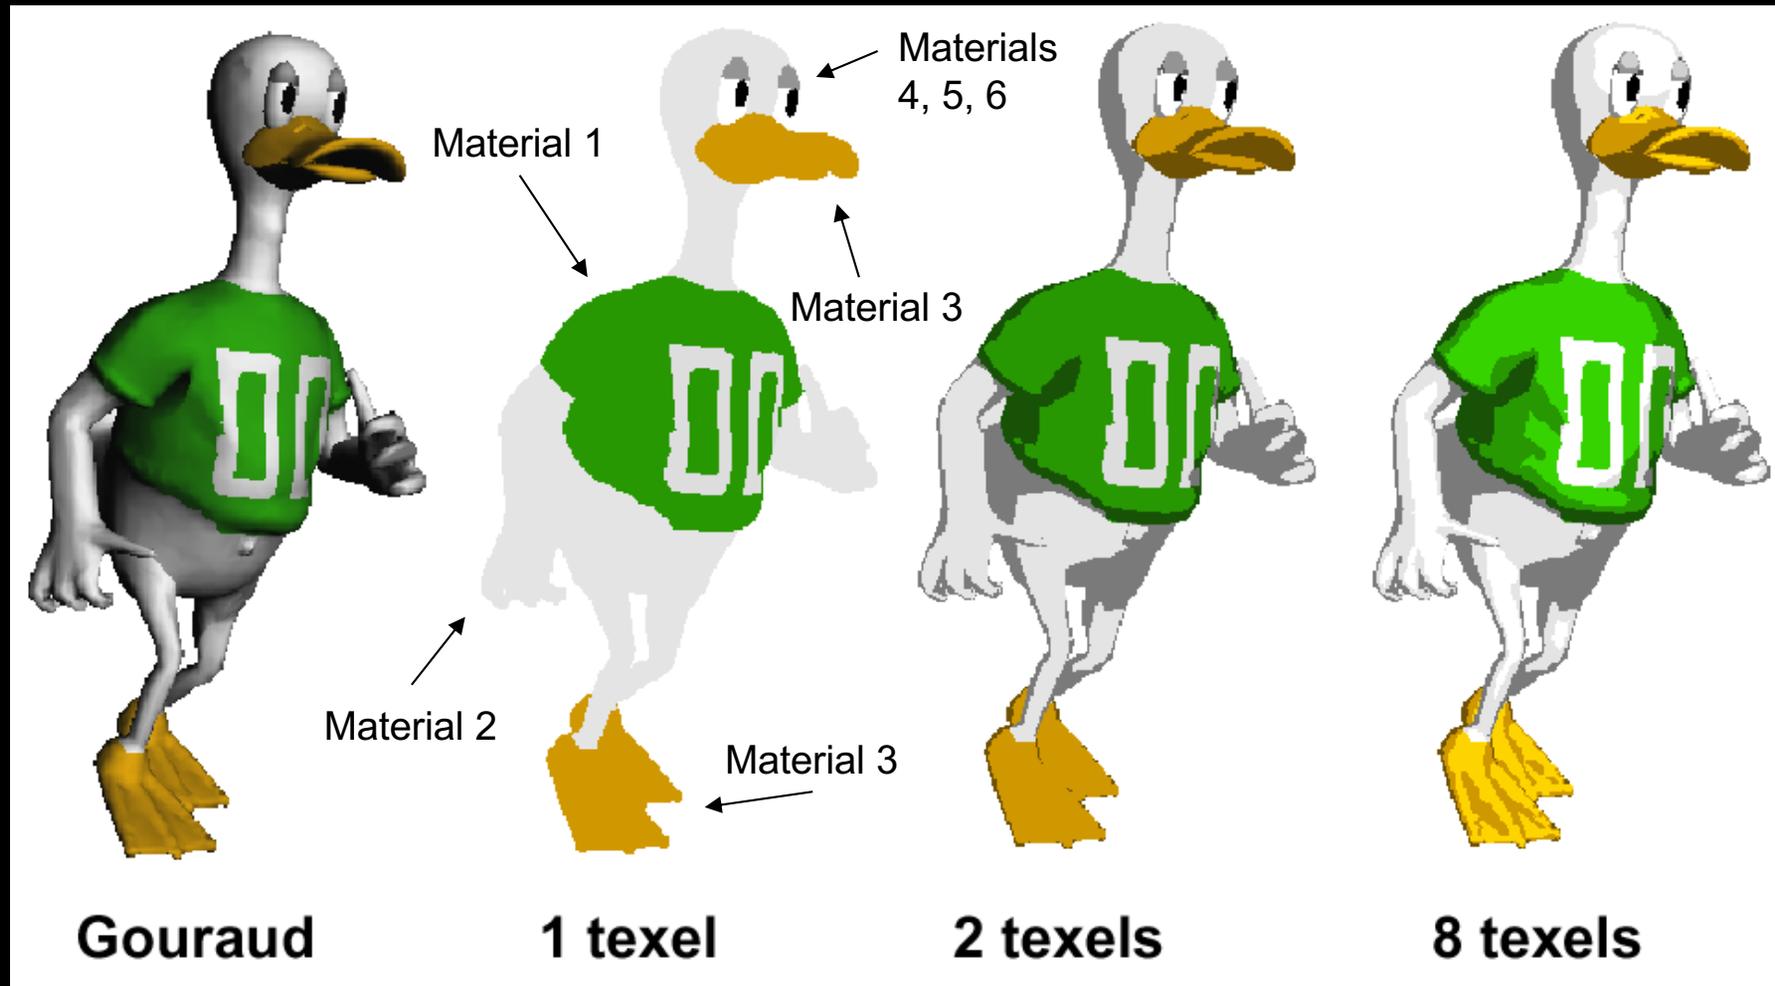

- Two-pass technique:  
Pass 1: standard shader  
Pass 2: use result from 1 as texture coordinates

Carl Marshall 2000

# Shading Variations

**Gouraud**

**1 texel**

**2 texels**

**8 texels**

Flat shading

Shadow

Shadow + highlight

# Outline

- Pen-and-Ink Illustrations
- Painterly Rendering
- Cartoon Shading
- **Technical Illustrations**

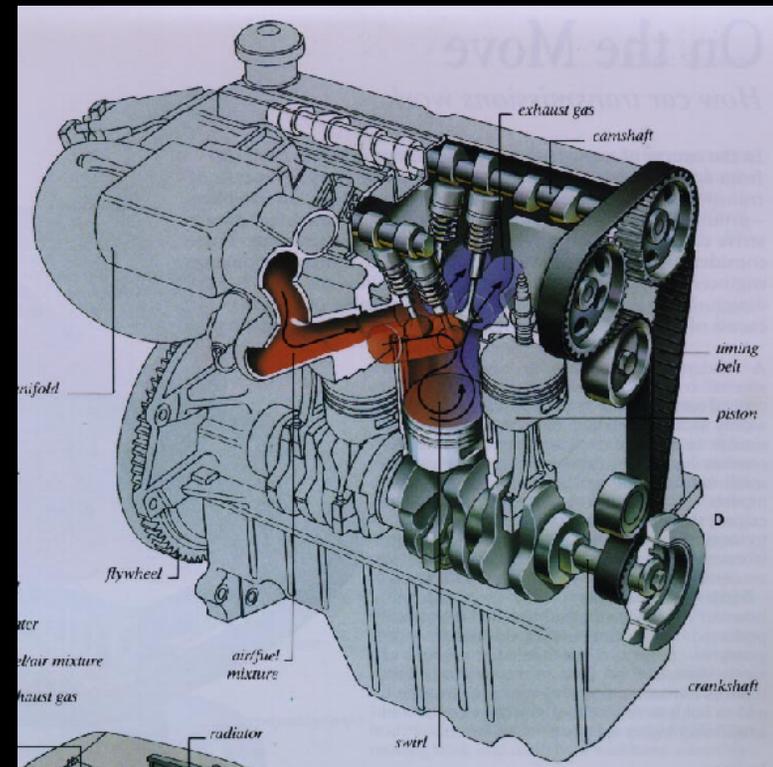

# Technical Illustrations

- Level of abstraction
  - Accent important 3D properties
  - Dimish or eliminate extraneous details
- Do not represent reality

Ruppel 1995

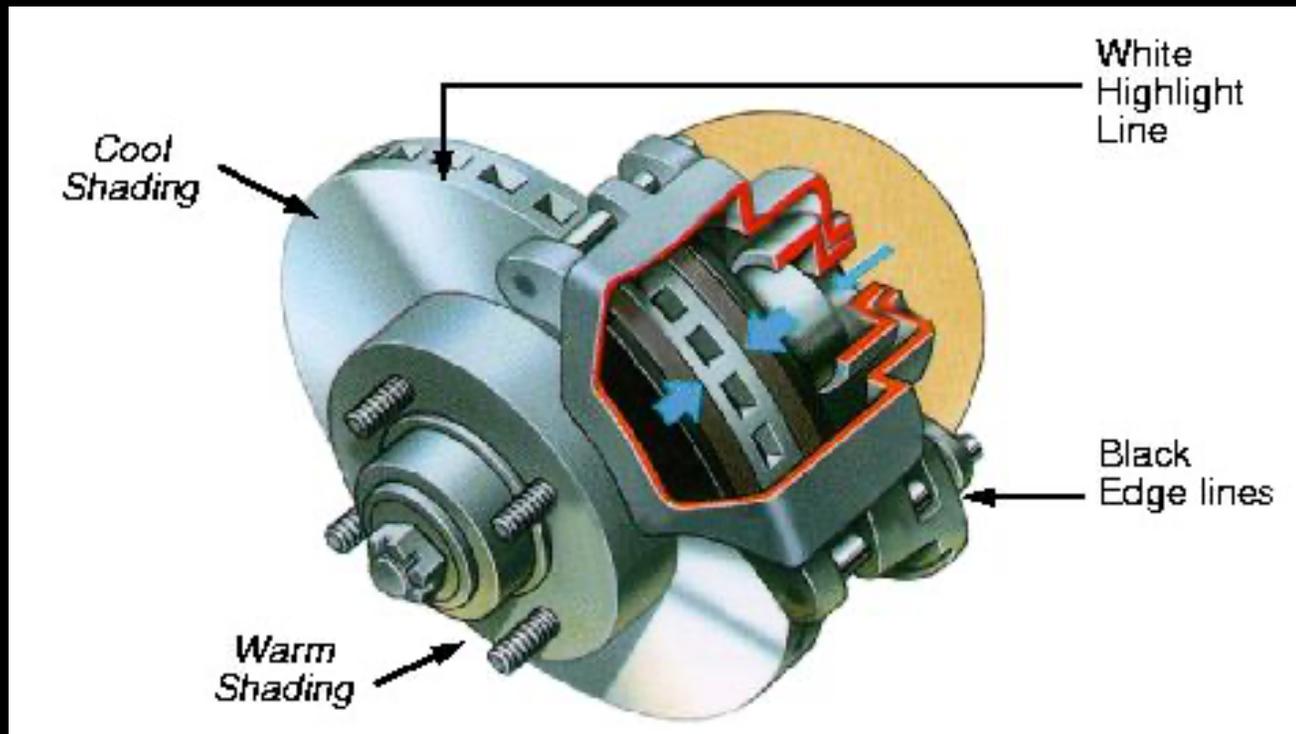

Photo

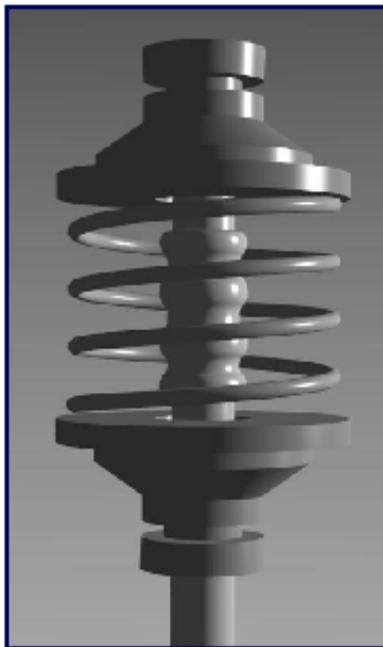

# Conventions in Technical Illustrations

- Black edge lines
- Cool to warm shading colors
- Single light source; shadows rarely used

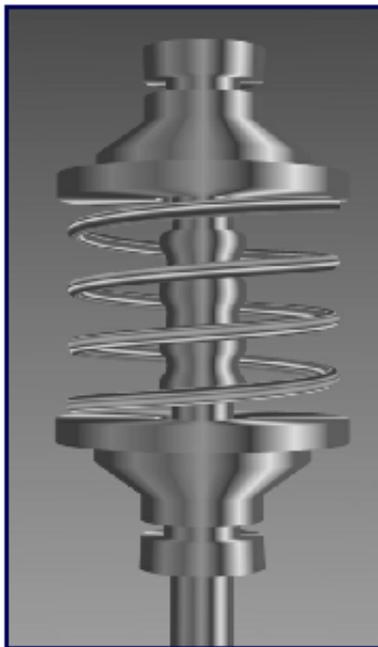

# Technical Illustration Example

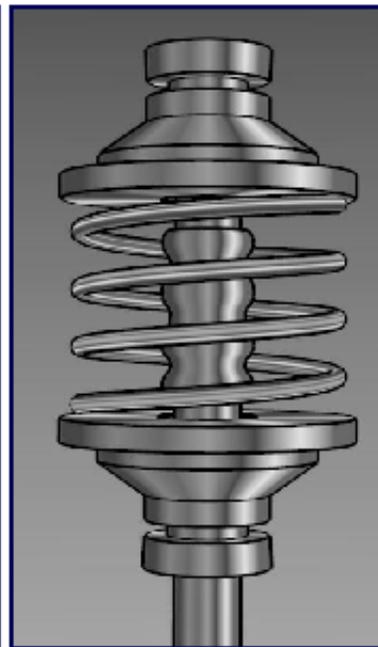

Phong shading

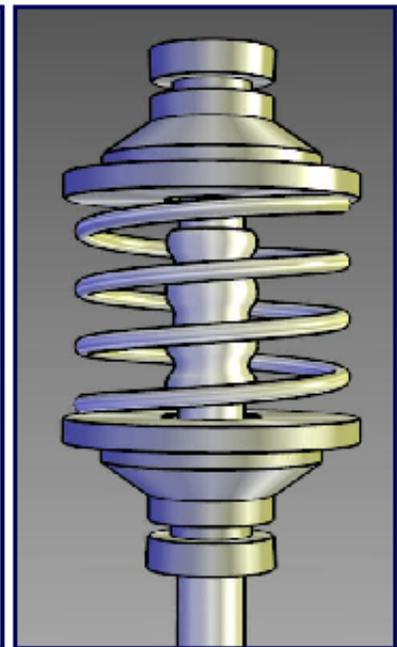

Metal shading  
(anisotropic)

Edge lines

Gooch shading  
(cool to warm shift  
gives better depth  
perception)

Source: Bruce Gooch

# The Future

- Smart graphics
  - Design from the user' s perspective
  - HCI, AI, Perception
- Artistic graphics
  - More tools for the creative artist
  - New styles and ideas

# Summary

- Beyond photorealism
  - Artistic appeal
  - Technical explanation and illustration
  - Scientific visualization
- Use all traditional computer graphics tools
- Employ them in novel ways
- Have fun!
