CSCI-201: Principles of Software Development
Spring 2022
Prof. Victor Adamchik

Course Description:
This course provides an introduction to backend and frontend web development in Java. Creating web applications requires various approaches and involves the integration of numerous technologies. The topics covered include object-oriented paradigm for programming (in Java); writing sophisticated concurrent network applications; managing data from relational databases using SQL and JDBC; building modern web pages with HTML, CSS, servlets, JSP and JavaScript; using professional tools on team project.

Learning Objectives:
• The ability to use Java in writing programs
• The ability to produce a software design based on requirements
• Understanding of concurrency
• The ability to write multi-threaded programs
• Understanding networking (socket) programming
• Understanding databases (MySQL) and SQL
• The ability to use HTML and CSS in designing graphical user interfaces
• The ability to utilize servlets, JSP and JavaScript for building web pages
• The ability to work effectively on a team

Prerequisites:
CSCI 104L – Data Structures and Object-Oriented Design

Recommended Textbooks:
Computing Environment:

To be able to do program development in this class, it is necessary to install

1. JDK (Java Development Kit)
2. Eclipse (an integrated development environment)
3. Gson (JSON data-binding support for Java from Google)
4. Tomcat (a web server designed to host and run Java-based web applications)
5. MySQL (relational database management system)
6. Workbench (a visual tool for database architects)
7. JDBC (an API for accessing database)
8. Java.servlet (an API for the HTTP protocol)

Lectures:

All lectures are in-person; they also will be videotaped. The recordings and lecture slides will be available in DEN.

Programming Labs:

The CPs will lead the lab section each week. There will be an assigned lab program each week that reinforces the topics covered in the lectures. The labs are intended to be completed during the lab period, and you are expected to work individually on the lab during the section. The lab assistants are there to answer any questions and help you, so use your time in lab wisely. You will be asked one or more questions by the lab assistants at the end of each lab to ensure you understood what was covered. You may drop any one lab with the lowest grade. We will not video record labs, because during the lab no new material will be taught.
**Final Project:**

The project will be assigned approximately half-way through the semester. You are required to submit an initial proposal. Once we receive all proposals, CPs will create (pseudo randomly) project groups. As a group you will have weekly meetings with your CPs. The project will consist of between 6-7 students. Formal documentation following the software engineering process will be required. The project deliverables should be submitted to DEN by the due date. We will discuss this in more details when the time comes.

**Programming Assignments:**

Assignments will be discussed in class and worked on individually. Discussion among students is fine, but no copying of other student’s code is allowed. The program needs to compile, and grading will only occur if the program is able to be run. Assignments shall be submitted to DEN and due by 11:59p.m. on the due date. Grading criteria will be provided with the assignment description. CPs will grade the assignments. Due to the manual grading, we require you to submit Eclipse project. **If we cannot import your project or if it contains errors after importing, or we cannot run it, you will get a zero.**

There is no late policy. Any assignment is submitted after 11:59pm on the due date late will receive a 0. **No late assignments** will be accepted except for extenuating circumstances with supporting documentation and a letter of support from your academic adviser. I understand that things happen, students get sick, accidents occur, computers crash, and so on, so budget your time appropriately considering any risk factors.

**Quizzes:**

There will be online quizzes in DEN. The quizzes are an individual effort. You may not use any means to communicate to other students on quizzes for any reason. The goal of quizzes is to ensure that students are attending/watching the lectures and understanding some of the concepts covered. All quizzes will be available starting on Thursday at 5pm with the deadline Friday at 11:59p.m. There are no makeup quizzes. The quiz length is set to 15 mins. Students can take the quiz (only once) at any time during this time frame. You may drop any one quiz with the lowest grade. Accommodations for students with letters from DSP/OSAS will be provided (“Students should make arrangements directly with their faculty member at least one week in advance of the quiz, test or exam date”).
Exams:

There will be two midterm exams. The exams are closed book and will consist of theoretical questions. The exams are an individual effort. The exams can only be taken within the scheduled time period. Accommodations for students with letters from DSP and for international students taking the class online will be provided. There are no makeup exams. If you miss an exam due to an emergency, official written documentation, whatever that may be based on the situation, will need to be submitted to me as soon as you are physically able (before the exam if possible).

Piazza & Emails: (piazza.com/usc/spring2022/csci201)

If you have a question about the material or logistics of the class, please post it on the piazza page (do not use e-mail). You may post it publicly to the whole class or privately to the instructors. Often times, if one student has a question/comment, other also have a similar question/comment. Please DO NOT send emails to the course staff unless your issue is private and/or a private post on Piazza is unsuitable.

Grading:

<table>
<thead>
<tr>

<td>Mar. 22</td>
<td>Apr. 19</td>
</tr>
</tbody>
</table>

**Academic Integrity:**

The Viterbi School of Engineering’s policy on Academic Integrity can be found at http://viterbi.usc.edu/academics/integrity/ All students are expected to understand and abide by these principles.

*In this course we encourage students to study together.* This includes discussing general strategies to be used on individual assignments. However, all work submitted for the class is to be done individually. Some examples of what is not allowed by the conduct code: copying all or part of someone else's work (by hand or by looking at others' files, either secretly or if shown), and submitting it as your own; giving another student in the class a copy of your assignment solution; consulting with another student during an exam. If you have questions about what is allowed, please discuss it with the course staff.
